

TERRAGUIDE® Sun

The state-of-the-art mobile flooring system.

The translucent version for intensive solar radiation.

The plate elements of TERRAGUIDE® Sun consist of UV-stable, white translucent synthetic materials, which has all the advantages of the TERRAGUIDE® flooring system, in addition they are especially developed for the temporary coverage of green with intensive solar radiation. The single plates are optimized and significantly reduce the generation of heat under the plate.

The translucence has a positive effect on the light transmission and for that reason on the upgrowth of the turf underneath.

Measurement / single unit:	25 x 9,5 x 2 cm
Measurement / 1/4m ² -flooring unit	50 x 50 x 2 cm, can be pre-assembled individually
Slip resistance:	R10 according BRG 181 DIN 51130: 2009-5 (TÜV Rheinland/LGA)
Haptic:	elastic (selection of material, cambered surface, construction of units)
Farbe:	White translucent
Material:	UV stabilised
Fire-resistance rating:	DIN EN 13501-1 Class E
